**Leifsgade****Copenhagen, Denmark**

City of Copenhagen

BENEFITS

Cost-efficient

Time-efficient

Increased safety

Less human involvement
and therefore less human
errorsCreating free outdoor leisure
space

Copenhagen's largest automated parking system in the heart of one of the trendiest neighborhoods

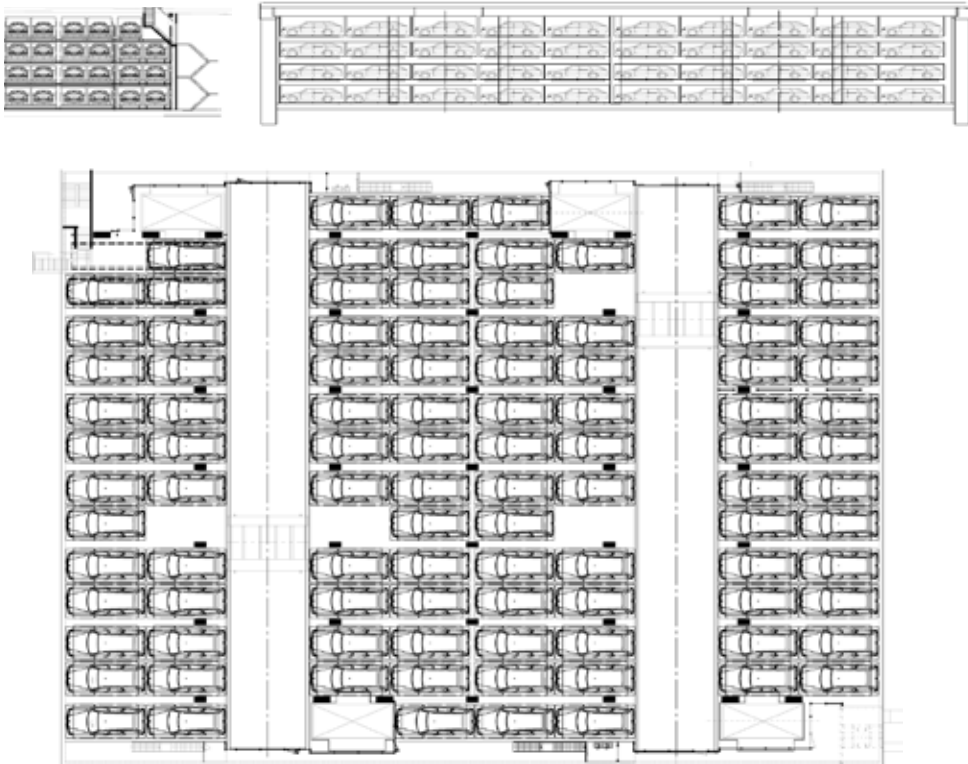

The Leifsgade parking garage in Copenhagen's trendy Islands Brygge district is built like two individual systems connecting box 1 and 2 as well as box 3 and 4 making it faster and more convenient to use. The surface has been cleverly converted into a playground for children from the surrounding area.

Once having parked the vehicle in one of the four transfer cabins and having answered the questions on the display system, the vehicle is moved on a lift to be handed over to a transfer car delivering the

vehicle to its allocated storage position. Upon request the transfer car retrieves the vehicle and delivers it to the lift that transports the vehicle back to the transfer cabin.

The system is operated by Westfalia's Savanna.NET® software. The Leifsgade parking garage is equipped with an algorithm counter which documents the frequency of vehicle use. Based on this evaluation, the most used vehicles are placed near the elevators to reduce waiting times for the user to a minimum. ■

SYSTEM LAYOUT

FEATURES

Technical Specifications:

- 4 transfer cabins
- 8 transfer cars with lifting Satellite®
- 4 vertical lifts
- Double-deep storage to maximize capacity
- 408 parking spaces

Size:

- 2,200 sqm. base area
- 4 levels

System Type:

- Pallet-based system
- Public use

Operational Since:

- 2010

ABOUT THE CUSTOMER:

The City of Copenhagen

In various respects Copenhagen is a role model for many of the world's large cities when it comes to sustainable development. The Danish capital is the world's first carbon neutral capital.
